**The Equation book is poised to be the runaway story of 2013**

When you think of the term “spiritual author” or “philosopher”, you get an image of a person who is deep into their adulthood, which is what makes the story of The Equation even more inspiring. The actual Equation was discovered by a 16 year old who immigrated to the United States alone with no family or money and hand wrote an entire book by 25. Fulfilling the embodiment of the American Dream, James Tarantin’s book ended up getting endorsed by one of the most prolific figures in the media, the legendary Larry King.

So how exactly did James Tarantin discover the Equation? A horrific tragedy at the turn of the millennium, set the Author to track historic clues and discover what was hidden in the margins. The Equation is the discovery on how to reverse the clock and alter one’s future.

The book spans over 58 years and takes place on 4 continents. The Equation satisfies the unfulfilled wish of many people to travel around the world, as the book ventures to many exotic locations. During this action-packed adventure, the Author discovers a ground-breaking theory:

There is  
no Luck,  
no Talent,  
no IQ,  
nor Time.

Controversial? Yes. But many best-selling books often are. Today, books like The Secret, The Da Vinci Code, The Alchemist, and The Celestine Prophecy have sold over 131 million copies combined. Current turmoil and despair worldwide have left people desiring for a complete transformation, a true beacon of triumph in these unsettling times.

Readers don’t want a Loose Theory, they Want a Modern Runway for a Higher Accomplishment.

Though “The Equation” explores many bigger than life subjects, the book is also thrilling, short, and has chic; a style that you don’t find in many spiritual books. The pages are filled with magical landscapes, youthful heroes, battles, victories, mystical codes, family life, the wish for love, and a sense of destiny. It is not a bullet-point book or a retold story, but rather a recent discovery presented through a true story, which allows the readers to feel that they are now a part of its triumph. Thousands of young Titans have already got the Equation down and the numbers seem to be growing each day.

The Equation book is an innovation that has now been launched worldwide and is available on most major online retailers, including Amazon, Barnes & Nobles, and Apple.

What would have happened if Albert Einstein unveiled  $E=MC^2$  in a Novel?
